Chapter 2: System Recovery and Advanced Maintenance

Multiple Choice Questions (MCQs)

2.1 Introduction to Post-Troubleshooting

Q1. The additional steps taken after fixing a computer problem to prevent it from recurring are called:

- A) System restoration
- B) **Post-troubleshooting maintenance ✓**
- C) Disk management
- D) Hardware diagnostics

Q2. Regular maintenance keeps the computer system:

- A) Slow and outdated
- B) Connected to the internet
- C) **Stable, secure, efficient, and reliable ✓**
- D) Fully backed up automatically

Q3. Which of the following is a result of poor computer maintenance?

- A) Faster processing speed
- B) Increased RAM capacity
- C) Better internet connection
- D) **Slow performance due to buildup of temporary files ✓**

Q4. If important system updates are not installed, the computer may:

- A) Run faster than before
- B) Connect to more devices
- C) **Freeze, crash, or fail to start ✓**
- D) Automatically reinstall the OS

Q5. Which poor maintenance problem allows viruses to enter the computer more easily?

- A) Hardware damage
- B) Data loss
- C) Slow performance
- D) **Security risks due to unpatched software ✓**

Q6. Hardware damage caused by poor maintenance is most commonly due to:

- A) Incorrect passwords
- B) Missing software updates
- C) **Dust buildup and overheating ✓**
- D) Too many user accounts

Q7. Data loss due to poor maintenance can occur because of:

- A) Too many installed programs
- B) Slow internet connection
- C) **Crashes or hardware failure without backups ✓**
- D) Frequent restarts

Q8. The process of regularly checking a computer's performance to detect issues early is called:

- A) Post-troubleshooting
- B) Disk cleanup
- C) **System health monitoring ✓**
- D) Patch management

Q9. Which of the following is something system health monitoring tools allow a user to do?

- A) Install new hardware automatically
- B) **View system warnings and error messages ✓**
- C) Upgrade RAM remotely
- D) Download software updates automatically

Q10. Regular system health monitoring helps to:

- A) Delete all temporary files permanently
- B) Format the hard drive automatically
- C) **Detect small issues before they become serious ✓**
- D) Increase internet speed

Q11. Which of the following operating systems includes built-in tools for system health monitoring?

- A) MS-DOS
- B) **Microsoft Windows ✓**
- C) BIOS
- D) Rufus

Q12. If a computer becomes slow due to full storage, the best long-term solution is to:

- A) Restart the computer every day
- B) Buy a new computer
- C) **Regularly remove unnecessary files and keep the system updated ✓**
- D) Disconnect from the internet

2.2 Using Built-in Diagnostic Tools

Q13. How many built-in diagnostic tools are introduced in Section 2.2?

- A) Two
- B) **Three** ✓
- C) Four
- D) Five

Q14. Which of the following is NOT one of the three built-in diagnostic tools in Windows?

- A) Task Manager
- B) Resource Monitor
- C) Event Viewer
- D) **Disk Cleanup** ✓

Q15. Task Manager shows real-time information about which of the following?

- A) Internet speed and battery life
- B) Printer status and display settings
- C) **CPU, RAM, and disk usage** ✓
- D) User accounts and passwords

Q16. The keyboard shortcut to open Task Manager is:

- A) Ctrl + Alt + Delete
- B) Windows + R
- C) **Ctrl + Shift + Esc** ✓
- D) Alt + F4

Q17. Which tab in Task Manager shows all active programs and how much system resources they are using?

- A) Performance tab
- B) Services tab
- C) **Processes tab** ✓
- D) Details tab

Q18. Which tab in Task Manager displays real-time graphs for CPU, memory, disk, and network usage?

- A) Processes tab
- B) **Performance tab** ✓
- C) Startup tab
- D) Users tab

Q19. To close a frozen application using Task Manager, you click:

- A) Close Program
- B) Force Quit
- C) Stop Process
- D) **End Task ✓**

Q20. Task Manager is most helpful when:

- A) You want to change the desktop background
- B) **Your computer is slow or an application stops responding ✓**
- C) You need to connect a USB device
- D) You want to update Windows

Q21. Resource Monitor provides _____ information than Task Manager.

- A) Less detailed
- B) The same
- C) **More detailed ✓**
- D) Faster but less accurate

Q22. Which command do you type in the Run dialog box to open Resource Monitor?

- A) taskmon
- B) eventvwr
- C) **resmon ✓**
- D) msconfig

Q23. Resource Monitor is especially helpful when the system is:

- A) Starting up normally
- B) Updating Windows
- C) Playing audio or video
- D) **Running slowly, overheating, or using excessive memory ✓**

Q24. The CPU tab in Resource Monitor shows:

- A) How much memory is free
- B) Which apps are using the network
- C) **Which processes and services are using the processor ✓**
- D) How much disk space is available

Q25. The Network tab in Resource Monitor shows:

- A) CPU usage by each application
- B) Free and used memory
- C) Disk read/write activity
- D) **Applications sending or receiving data over the internet or network ✓**

Q26. Which Resource Monitor tab monitors programs reading from or writing to the hard drive?

- A) CPU tab
- B) Memory tab
- C) Network tab
- D) **Disk tab** ✓

Q27. Event Viewer is a built-in Windows tool that:

- A) Cleans up temporary files
- B) Shows real-time CPU usage graphs
- C) **Records detailed logs of system activities** ✓
- D) Manages user accounts

Q28. To open Event Viewer, you type which command in the Run dialog box?

- A) resmon
- B) taskmon
- C) **eventvwr** ✓
- D) syslog

Q29. Event Viewer helps users check for errors related to:

- A) Only software issues
- B) Only hardware issues
- C) Only security issues
- D) **Software, hardware, and security** ✓

Q30. The keyboard shortcut to open the Run dialog box in Windows is:

- A) Ctrl + Shift + Esc
- B) Alt + F4
- C) **Windows + R** ✓
- D) Ctrl + Alt + Delete

2.3 System Recovery Options

Q31. System recovery options are used when:

- A) You want to install new software
- B) You need to change the desktop theme
- C) **Basic troubleshooting is not enough to fix a serious problem** ✓
- D) You want to connect to Wi-Fi

Q32. How many commonly used recovery tools are discussed in Section 2.3?

- A) Two
- B) **Three** ✓
- C) Four
- D) Five

Q33. Safe Mode starts Windows with only:

- A) All programs and full internet access
- B) Antivirus and system update tools
- C) **The most fundamental drivers and services ✓**
- D) Administrator account settings only

Q34. Safe Mode is useful when:

- A) The computer is working normally
- B) You want to improve internet speed
- C) You need to create a new user account
- D) **A program or driver is causing the computer to freeze ✓**

Q35. On a modern Windows system, which key do you press in Startup Settings to enter Safe Mode?

- A) F1
- B) F2
- C) F5
- D) **F4 ✓**

Q36. On older computer systems, which key is pressed repeatedly before the Windows logo to enter Safe Mode?

- A) F4
- B) F5
- C) **F8 ✓**
- D) F10

Q37. Safe Mode with Networking is different from regular Safe Mode because it:

- A) Loads all background programs
- B) Disables all hardware drivers
- C) **Includes network drivers so you can access the internet ✓**
- D) Automatically repairs the system

Q38. Which key do you press to enter Safe Mode with Networking from the Startup Settings menu?

- A) F4
- B) **F5 ✓**
- C) F6
- D) F8

Q39. Which of the following is a correct precaution while using Safe Mode?

- A) Delete all system files to free up space
- B) Install as many programs as possible
- C) Change all settings to improve performance
- D) **Restart the computer normally after finishing the task ✓**

Q40. System Restore takes the computer back to an earlier state without:

- A) Reinstalling Windows
- B) Changing system settings
- C) **Deleting personal files ✓**
- D) Removing the operating system

Q41. A restore point is best described as:

- A) A backup of personal files like photos and documents
- B) A type of antivirus scan
- C) **A saved snapshot of the system's settings and configuration ✓**
- D) A copy of the Windows installation files

Q42. Restore points are created automatically before:

- A) A user logs in
- B) Disk Cleanup is run
- C) **System updates or driver installations ✓**
- D) A virus scan is performed

Q43. To create a restore point manually, you go to Control Panel, then System and Security, then System, and then click:

- A) Advanced System Settings
- B) Recovery Options
- C) **System Protection ✓**
- D) Device Manager

Q44. To use a restore point to go back to an earlier state, you open Control Panel and go to:

- A) System Protection
- B) **Recovery → Open System Restore ✓**
- C) Update & Security
- D) Device Manager

Q45. Bootable recovery media is used when:

- A) The computer needs a software update
- B) A file is accidentally deleted
- C) The screen brightness needs adjustment
- D) **The computer fails to start and Safe Mode is not accessible ✓**

Q46. Bootable recovery media is a:

- A) Type of antivirus program
- B) Hard drive partition
- C) **USB flash drive or DVD containing important system files ✓**
- D) Cloud backup service

Q47. Which of the following is NOT a tool available after booting from recovery media?

- A) Startup Repair
- B) System Restore
- C) Command Prompt
- D) **Resource Monitor** ✓

Q48. Rufus is used to:

- A) Scan for viruses on a USB drive
- B) Clean up temporary files
- C) Check the partition style of a disk
- D) **Create a bootable USB drive** ✓

Q49. What is the minimum recommended USB drive size to create a bootable USB?

- A) 4 GB
- B) 8 GB
- C) **16 GB** ✓
- D) 32 GB

Q50. MBR stands for:

- A) Memory Boot Record
- B) Main BIOS Record
- C) **Master Boot Record** ✓
- D) Multiple Boot Registry

Q51. GPT stands for:

- A) General Partition Table
- B) Graphics Processing Tool
- C) General Program Type
- D) **GUID Partition Table** ✓

Q52. MBR supports a maximum disk size of:

- A) 500 GB
- B) 1 TB
- C) **2 TB** ✓
- D) 4 TB

Q53. GPT supports disks larger than:

- A) 500 GB
- B) 1 TB
- C) **2 TB** ✓
- D) 500 MB

Q54. MBR supports a maximum of how many primary partitions?

- A) 2
- B) **4 ✓**
- C) 8
- D) 100

Q55. GPT allows over how many partitions?

- A) 4
- B) 10
- C) 50
- D) **100 ✓**

Q56. GPT partition style is required for:

- A) Older BIOS-based systems
- B) Systems with less than 2 TB storage
- C) **UEFI-based systems ✓**
- D) Systems running Windows XP

Q57. To check the partition style of a disk, you press Win + X and select:

- A) Device Manager
- B) System Information
- C) **Disk Management ✓**
- D) Control Panel

Q58. After opening Disk Management to check partition style, you right-click the disk label and choose Properties, then go to the:

- A) General tab
- B) Security tab
- C) Hardware tab
- D) **Volumes tab ✓**

2.4 BIOS/UEFI and Boot Process Awareness

Q59. The special built-in software stored on the motherboard that gives the computer basic startup instructions is called:

- A) Shell
- B) Kernel
- C) Device driver
- D) **Firmware ✓**

Q60. Firmware is stored on:

- A) The hard drive
- B) A USB flash drive
- C) The RAM chip
- D) **A chip on the motherboard ✓**

Q61. BIOS stands for:

- A) Basic Internal Operating System
- B) **Basic Input/Output System ✓**
- C) Binary Input/Output Software
- D) Boot Internal OS System

Q62. UEFI stands for:

- A) **Unified Extensible Firmware Interface ✓**
- B) Universal External Firmware Interface
- C) Unified External File Interface
- D) Universal Extensible Firmware Input

Q63. BIOS shows a ____ menu and works with the keyboard only.

- A) Colorful graphical
- B) Touch-screen
- C) **Basic, text-only ✓**
- D) Animated

Q64. UEFI supports which of the following that BIOS does not?

- A) Checking RAM on startup
- B) Setting the boot order
- C) **A graphical menu using both mouse and keyboard ✓**
- D) Storing the operating system

Q65. BIOS was first developed in the:

- A) 1970s
- B) **1980s ✓**
- C) 1990s
- D) 2000s

Q66. Which of the following is a role of BIOS/UEFI in starting the computer?

- A) Loading browser settings
- B) Running antivirus scans
- C) **Checking if hardware is working correctly ✓**
- D) Managing user accounts

Q67. BIOS/UEFI allows users to change system settings like:

- A) Desktop wallpaper and themes
- B) Browser history and cookies
- C) **Date, time, and boot order** ✓
- D) Wi-Fi passwords and network names

Q68. POST stands for:

- A) Periodic Operating System Test
- B) **Power-On Self-Test** ✓
- C) Primary Output System Test
- D) Process Operating Self-Test

Q69. POST is the first thing the firmware does:

- A) After Windows finishes loading
- B) When the user logs in
- C) **After the computer is turned on** ✓
- D) When a USB is inserted

Q70. If POST finds all hardware working correctly, the computer:

- A) Shuts down for safety
- B) Displays an error message
- C) Beeps three times
- D) **Continues to load the operating system** ✓

Q71. If the RAM is missing, what does the computer do during POST?

- A) Loads Windows in Safe Mode
- B) Shows a blue screen
- C) **Beeps continuously** ✓
- D) Resets all BIOS settings

Q72. To open BIOS/UEFI settings, which of the following steps is correct?

- A) Open Task Manager and click BIOS settings
- B) Go to Settings > Update & Security > BIOS
- C) Type "bios" in the Windows search bar
- D) **Shut down the computer, turn it on, and press the correct key immediately (Del, F2, etc.)** ✓

Q73. Which of the following is a key commonly used to enter BIOS/UEFI?

- A) F9
- B) **F2** ✓
- C) F11
- D) Ctrl + Esc

Q74. Boot order means:

- A) The speed at which the computer starts
- B) The sequence of programs that run at startup
- C) **The sequence in which the computer looks for a device to load the operating system** ✓
- D) The list of users who have logged into the computer

Q75. To change the boot order in BIOS/UEFI, you go to the:

- A) Security tab
- B) Memory tab
- C) Advanced tab
- D) **Boot tab or menu** ✓

Q76. To restore wrong BIOS settings to their original state, you select:

- A) Format and Reinstall
- B) Safe Mode Options
- C) **Load Setup Defaults or Reset to Default** ✓
- D) Boot Repair Mode

Q77. If the computer cannot start due to missing files or errors, this can be fixed using:

- A) Resource Monitor
 - B) Task Manager
 - C) **Startup Repair from a recovery USB or DVD** ✓
 - D) Windows Defender
-

2.5 Data Recovery Techniques

Q78. How many main ways are there to recover deleted files as described in the chapter?

- A) One
- B) Three
- C) Four
- D) **Two** ✓

Q79. When a file is deleted in Windows, where does it go first?

- A) Permanent deletion
- B) Backup folder
- C) **Recycle Bin** ✓
- D) Downloads folder

Q80. To restore a file from the Recycle Bin, you right-click the file and select:

- A) Recover
- B) Undelete
- C) Move Back
- D) **Restore** ✓

Q81. File History is a ____ feature in Windows.

- A) Virus scanning
- B) Disk cleanup
- C) **Backup** ✓
- D) System restore

Q82. To enable File History in Windows, you go to:

- A) Control Panel > System > Protection
- B) Task Manager > Performance
- C) **Settings > Update & Security > Backup** ✓
- D) Start > All Programs > Backup

Q83. After enabling File History, Windows backs up files from which locations?

- A) BIOS settings and system files only
- B) Only files on the Desktop
- C) Only files in the Downloads folder
- D) **Documents, Pictures, Desktop, and other important folders** ✓

Q84. The Previous Versions feature allows you to recover:

- A) Deleted system drivers
- B) Corrupted BIOS settings
- C) **An earlier version of a file or folder** ✓
- D) Deleted programs and applications

Q85. To access Previous Versions of a file, you right-click it, choose Properties, and go to the:

- A) General tab
- B) Security tab
- C) Sharing tab
- D) **Previous Versions tab** ✓

Q86. Tenorshare is described as a ____ recovery program.

- A) Paid and complex
- B) Built-in Windows tool
- C) **Free and easy-to-use file** ✓
- D) Hardware-based

Q87. Tenorshare can scan which of the following to find deleted files?

- A) Only USB drives
- B) Only the Desktop folder
- C) Only the Recycle Bin
- D) **Hard drive, USB, or memory card ✓**

Q88. In Tenorshare, what is the first step after opening the program?

- A) Click Scan immediately
- B) Choose the file type to recover
- C) Click Recover
- D) **Select the location (drive or folder) from which you want to recover the file ✓**

Q89. After scanning in Tenorshare, you select the files you want and then click:

- A) Restore
- B) Save
- C) **Recover ✓**
- D) Extract

Q90. Recovery success with Tenorshare depends on:

- A) The size of the deleted file only
- B) The type of file deleted
- C) The version of Windows installed
- D) **How recently the file was deleted and whether new data has overwritten it ✓**

Q91. Which of the following is a limitation of data recovery tools?

- A) They always recover 100% of deleted files
- B) They only work on USB drives
- C) They require a paid subscription
- D) **Recovery is not always possible if the hard drive is damaged or formatted ✓**

Q92. Why should you never install recovery software on the same drive where the lost file was stored?

- A) It will delete all other files on the drive
- B) The software will not run from that drive
- C) **It may overwrite the deleted data, reducing the chance of successful recovery ✓**
- D) It slows down the scanning process

Q93. The first thing you should check before using any advanced recovery tool is:

- A) Run Tenorshare immediately
- B) Format the drive and reinstall Windows
- C) **Check the Recycle Bin ✓**
- D) Open Resource Monitor

2.6 Best Practices for Preventive Maintenance

Q94. Preventive maintenance means:

- A) Fixing a computer after it crashes
- B) Installing a new operating system regularly
- C) **Doing regular simple tasks to avoid bigger problems in the future ✓**
- D) Replacing hardware components every year

Q95. Which of the following types of files does Disk Cleanup remove?

- A) System drivers and OS files
- B) Personal photos and documents
- C) **Temporary internet files, system cache, and Recycle Bin contents ✓**
- D) Installed programs and applications

Q96. Disk Cleanup is accessed by typing "Disk Cleanup" in the:

- A) Run dialog box
- B) Task Manager
- C) **Windows search bar ✓**
- D) Control Panel's Advanced Settings

Q97. During Disk Cleanup, which drive is usually selected for cleaning?

- A) D:
- B) E:
- C) USB drive
- D) **C: ✓**

Q98. Software updates released to fix bugs, add features, and improve security are also known as:

- A) Drivers
- B) Firmware
- C) **Patches ✓**
- D) Restore points

Q99. Which of the following are the two types of software updates?

- A) Quick updates and full updates
- B) System updates and security updates
- C) **Operating system updates and application updates ✓**
- D) Hardware updates and firmware updates

Q100. To check for Windows updates, you go to:

- A) Control Panel > System > Updates
- B) Task Manager > Performance > Updates
- C) Start > All Programs > Windows Update
- D) **Settings > Update & Security > Windows Update ✓**

Q101. Windows Defender protects the computer from:

- A) Hardware damage and overheating
- B) Disk errors and partition failures
- C) **Viruses, malware, and other security threats ✓**
- D) BIOS configuration errors

Q102. Which type of scan in Windows Defender checks only common problem areas?

- A) Full Scan
- B) **Quick Scan ✓**
- C) Custom Scan
- D) Deep Scan

Q103. Which type of scan in Windows Defender checks the entire system thoroughly?

- A) Quick Scan
- B) **Full Scan ✓**
- C) Express Scan
- D) Smart Scan

Q104. Real-time protection in Windows Defender means it:

- A) Scans the system once a day automatically
- B) Requires manual activation for each scan
- C) Only protects files in the Documents folder
- D) **Continuously watches the system in the background and alerts you to suspicious activity ✓**

Q105. A maintenance calendar helps you:

- A) Create restore points automatically
 - B) Back up your files to the cloud
 - C) **Remember when to perform tasks like virus scans, cleanups, and updates ✓**
 - D) Monitor CPU and RAM usage in real time
-

2.7 System Documentation and Logs

Q106. System documentation involves keeping records of:

- A) Only hardware specifications
- B) Only error messages
- C) Only software licenses
- D) **Actions such as installing software, fixing issues, and performing updates ✓**

Q107. Keeping proper system maintenance records makes it easier to:

- A) Upgrade hardware automatically
- B) Connect to the internet faster
- C) **Manage and troubleshoot systems in the future ✓**
- D) Create new user accounts quickly

Q108. Which built-in Windows tool automatically records detailed logs of system activity?

- A) Task Manager
- B) Resource Monitor
- C) Disk Cleanup
- D) **Event Viewer ✓**

Q109. System documentation helps a new technician by:

- A) Allowing them to access the BIOS settings remotely
- B) Installing updates automatically on their behalf
- C) **Providing a history of what was done to the computer so they can continue without starting from scratch ✓**
- D) Giving them administrator access to all accounts

Q110. Which of the following is the best practice for maintaining system logs?

- A) Write logs only when a serious error occurs
- B) Save logs in the Recycle Bin for easy access
- C) Document changes only at the end of the year
- D) **Record every maintenance task, repair, and update immediately after it is done ✓**

Short Questions

2.1 Introduction to Post-Troubleshooting

1. What is post-troubleshooting maintenance?
2. Why is solving a problem only the "first step" in maintaining a computer?
3. What is the importance of continuous maintenance for a computer system?
4. List any **four problems** that can occur due to poor maintenance of a computer.
5. What is "Slow Performance" in the context of poor maintenance? What causes it?
6. How does poor maintenance lead to **security risks**?
7. How can dust and overheating damage a computer?
8. What is data loss? How can it occur due to poor maintenance?
9. What is meant by **system health monitoring**?
10. List **four things** that system health monitoring tools allow a user to do.

11. How does regular system health monitoring help prevent serious problems?
 12. Give one example showing how a lack of maintenance can cause the same problem to return.
 13. What are the four qualities that regular maintenance keeps a computer system? (*stable, secure, efficient, reliable*)
-

2.2 Using Built-in Diagnostic Tools

1. Name the three built-in diagnostic tools available in Microsoft Windows.
 2. What is Task Manager? What information does it show in real time?
 3. Write **two ways** to open Task Manager in Windows.
 4. What does the **Processes tab** in Task Manager show?
 5. What does the **Performance tab** in Task Manager display?
 6. What is the purpose of the **"End Task"** button in Task Manager?
 7. When is Task Manager most helpful to use?
 8. What is Resource Monitor? How is it different from Task Manager?
 9. Write **two ways** to open Resource Monitor in Windows.
 10. What command do you type in the Run dialog box to open Resource Monitor?
 11. What does the **CPU tab** in Resource Monitor show?
 12. What does the **Memory tab** in Resource Monitor display?
 13. What does the **Disk tab** in Resource Monitor monitor?
 14. What does the **Network tab** in Resource Monitor show?
 15. When is Resource Monitor especially helpful?
 16. What is Event Viewer? What does it record?
 17. What command do you type to open Event Viewer using the Run dialog box?
 18. What types of events does Event Viewer help users check? Give three examples.
 19. What is the shortcut key to open the Run dialog box in Windows?
-

2.3 System Recovery Options

1. What are system recovery options? Why are they needed?
2. What is **Safe Mode**? What does it start Windows with?
3. Name **three situations** when Safe Mode is useful.
4. What key do you press to enter Safe Mode using Startup Settings?
5. How do you open Safe Mode on older computer systems?
6. What is **Safe Mode with Networking**? How is it different from regular Safe Mode?

7. What key do you press to enter Safe Mode with Networking?
 8. List any **three precautions** to follow while using Safe Mode.
 9. What is **System Restore**? Does it delete personal files?
 10. What is a **restore point**? Give one example of when a restore point is created automatically.
 11. How can a user create a restore point **manually**? Write the steps briefly.
 12. Write the steps to **use** a restore point to return the system to an earlier state.
 13. What is **Bootable Recovery Media**?
 14. What device is used as bootable recovery media?
 15. Name **four recovery tools** available after starting from bootable media.
 16. When do we use bootable recovery media instead of Safe Mode?
 17. What is **Rufus**? What is it used for?
 18. What is the minimum size of USB drive required to create a bootable USB?
 19. What is **MBR (Master Boot Record)**? What are its two limitations?
 20. What is **GPT (GUID Partition Table)**? State two advantages over MBR.
 21. What type of partition style is required for UEFI-based systems — GPT or MBR?
 22. Write the steps to **check the partition style** (MBR or GPT) of a disk in Windows.
 23. What happens if you use a GPT USB on a system that requires MBR format?
 24. What is **Startup Repair**? When is it used?
-

2.4 BIOS/UEFI and Boot Process Awareness

1. What is **firmware**? Where is it stored in a computer?
2. Is firmware stored on the hard drive? Does it get deleted when the computer is turned off?
3. What is **BIOS**? State two characteristics of BIOS.
4. What is **UEFI**? State two advantages of UEFI over BIOS.
5. When was BIOS first developed?
6. State the **three roles** of BIOS/UEFI in starting the computer.
7. What is **POST**? What does it stand for?
8. When does POST run — before or after the operating system loads?
9. What does POST check when the computer is turned on?
10. What happens if POST finds all hardware working correctly?
11. What happens if POST detects a problem? Give one example.
12. Give an example of what happens during POST if the RAM is missing.
13. How do you open BIOS/UEFI settings? Write the steps briefly.
14. Give examples of keys used to open BIOS/UEFI for different computer brands.

15. What is **boot order**?
 16. Give an example of a boot order sequence.
 17. Write the steps to change the boot order in BIOS/UEFI.
 18. How do you **reset BIOS to default settings**?
 19. What option do you select inside BIOS/UEFI to restore default settings?
-

2.5 Data Recovery Techniques

1. Why might files be lost from a computer? Give two reasons.
 2. What are the **two main methods** to recover deleted files?
 3. What is the **Recycle Bin**? How does it help in file recovery?
 4. How do you restore a file from the Recycle Bin? Write the steps briefly.
 5. What is **File History**? What does it do?
 6. How do you enable File History in Windows? Write the path to access it.
 7. What types of files does File History back up automatically?
 8. What is the **Previous Versions** feature in Windows?
 9. How do you access the Previous Versions of a file? Write the steps.
 10. What is **Tenorshare**? What is it used for?
 11. What types of storage devices can Tenorshare scan?
 12. Write the **four steps** to use Tenorshare to recover a deleted file.
 13. What does "recovery success depends on" when using Tenorshare?
 14. State **three limitations** of data recovery tools.
 15. Why should you **never install recovery software on the same drive** where the lost file was stored?
 16. What is the **first thing** you should check before using any advanced recovery tool?
 17. Can files be recovered if the hard drive is physically damaged or formatted? Explain briefly.
-

2.6 Best Practices for Preventive Maintenance

1. What is **preventive maintenance**? Why is it important for computers?
2. What types of unnecessary files does Disk Cleanup remove? Name four types.
3. What is **Disk Cleanup**? What is it used for?
4. Write the **steps to perform Disk Cleanup** in Windows.
5. Which drive is usually selected during Disk Cleanup?
6. What is **patch management** (system updation)?

7. Why do developers release software updates (patches)?
 8. What are the **two types of software updates**?
 9. Write the **steps to check for updates** in Windows.
 10. What is **Windows Defender**?
 11. What types of threats does Windows Defender protect against?
 12. What is a **Quick Scan** in Windows Defender?
 13. What is a **Full Scan** in Windows Defender? How is it different from Quick Scan?
 14. What is **real-time protection** in Windows Defender?
 15. What is a **maintenance calendar**? Why is it useful?
 16. Give two examples of tasks that a maintenance calendar helps you remember.
-

2.7 System Documentation and Logs

1. What is **system documentation**?
2. Why is it important to keep proper system maintenance records?
3. What types of actions should be documented in a system log?
4. How does system documentation help in future troubleshooting?
5. Name any **two tools** or methods used to keep system documentation.
6. What information is typically included in a maintenance log entry?
